

PASTA worksheet

Stages	Sneaker company
I. Define business and security objectives	● <i>The app will be used to purchase products on the mobile app</i> ● <i>The app must process financial transactions</i> ● <i>The app must adhere to the PCI-DSS</i>
II. Define the technical scope	● <i>Application programming interface (API)</i> ● <i>Public key infrastructure (PKI)</i> ● <i>SHA-256</i> ● <i>SQL</i> The Application programming interface is set of rules that defines how softwares communicate and interact with each other which is useful for collaboration with third party softwares the use of PKI would secure the exchange of customer sensitive data online. The SHA-256 would be used to protect customer sensitive data such as usernames and passwords, the SQL will be used to interact with customer records stored in the mobile app database.
III. Decompose application	<u>Sample data flow diagram</u>
IV. Threat analysis	● <i>XSS attacks</i> ● <i>SQL injection</i>
V. Vulnerability analysis	● <i>Lack of input sanitization</i> ● <i>Lack of prepared statements</i>
VI. Attack modeling	<u>Sample attack tree diagram</u>
VII. Risk analysis and impact	Prepared statement Hashing Use of PKI framework

	Principle of least privilege
